PROFESSIONAL SUMMARY

MSc Computer Science (Conversion) candidate at UCD, expected to graduate in December 2026. Built production-style backend and full-stack applications using Java, Spring Boot, React and PostgreSQL, with experience collaborating in Scrum teams, coordinating APIs and solving backend integration issues. Seeking graduate or junior backend/full-stack software engineering opportunities in Ireland.

EDUCATION

University College Dublin (UCD), Dublin, Ireland	MSc Computer Science (Conversion) · GPA 3.92/4.20 (current)	2025/09 - 2026/12
• Selected Modules: Distributed Systems, Information Security, Cloud Computing, Big Data Programming		
Northeastern University, China	Bachelor of Economics	2019/08 - 2023/07

TECHNICAL SKILLS

- Programming: Java, Python, JavaScript, SQL
- Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, Node.js, Express, Flask, REST APIs
- Frontend: React, Redux Toolkit, React Router, Tailwind CSS, Material UI
- Databases: PostgreSQL, MySQL
- Testing: JUnit 5, Mockito, MockMvc, Vitest, React Testing Library, pytest
- Tools: Git, Docker, GitHub Actions, Maven, Vite, OpenAPI/Swagger

PROJECTS

E-Shop — Full-Stack E-Commerce Platform Live Demo	Independent Project	2026/03 - 2026/08
• Built and deployed a multi-role e-commerce platform using React, Spring Boot and PostgreSQL, supporting customer, seller and administrator workflows.		
• Secured REST APIs with HttpOnly JWT cookies, CSRF protection, role-based access control and resource ownership validation.		
• Implemented server-verified Stripe payments, BigDecimal pricing, transactional inventory updates and row locking to protect order and stock integrity.		
• Created 82 automated frontend and backend tests and configured GitHub Actions to run test, lint and build verification.		
Tablé — Immediate Dining Platform GitHub Repository	Backend Lead · University Team Project	2026/06 - 2026/08
• Led development of the Node.js, Express and PostgreSQL backend for authentication, restaurants, bookings, offers and flash-deal campaigns.		
• Enforced booking rules by validating route ETA against restaurant hold windows before updating shared booking and table inventory.		
• Integrated Google Routes and FastAPI services with deterministic fallback behaviour when external dependencies were unavailable.		
• Coordinated API contracts and backend integration within a six-person Scrum team, communicating interface changes and resolving integration issues across team members.		
Dublin Bikes Web Application GitHub Repository	Full-Stack Developer · University Team Project	2026/02 - 2026/05
• Collaborated in a three-person Scrum team, contributing to sprint planning, task coordination and development of a Flask application displaying live and predicted Dublin Bikes availability.		
• Developed a data pipeline integrating JCDecaux and OpenWeather APIs and storing historical station and weather information in MySQL.		
• Built an interactive Google Maps dashboard and integrated scikit-learn predictions, with pytest coverage for routes, validation and access control.
